How to set up Fingerprint ID

1. Ensure that both the sensor and your finger are clean and dry.

2. Place your finger on the sensor and hold it steadily until you hear a beep.

3. Lift your finger and then place it back on the sensor, making small adjustments to its position each time. 4. The sensor will scan your fingerprint once and securely store the information locally.

Definitions

Master Code

Required for programming and lock settings. Master Code can be used to unlock the door while lock is in Vacation Mode. Default Master Code MUST be changed before programming and using the lock.

Auto Lock

Auto Lock feature will automatically extend the deadbolt after it has been unlocked. Default is set to 0 seconds which means Auto Lock is Off.

Wrong Entry

After 5 consecutive unsuccessful attempts to open the deadbolt, the deadbolt will emit three beeps, the keypad will flash three times and the keypad will shut down for 1 minute.

Vacation Mode

Vacation Mode is designed to enhance security for when you are away for extended periods of time. The lock does not recognize any User Codes when Vacation Mode is active. Master Code can be used to unlock the deadbolt and disable Vacation Mode.

Silent Mode

The beep sounds when pressing keypad and all system alerts can be muted.

System Alerts

One-Touch Locking

To easily lock the deadbolt, press the One-Touch Locking Button. For Fingerprint models, press the One-Touch Locking

Button or touch the Fingerprint Sensor. Tamper Alert

In the event the exterior lock is being pried or tampered with, the lock will emit 2 beeps and **CONFIRM** button flashes red for 15 seconds.

One Time Unlock Code

One-Time Unlock Codes provides temporary access to guests and is deleted after the deadbolt is unlocked. For additional security, One-Time Unlock Codes are deleted 72 hours after programming.

User Code

User codes are 4-8 digits and should not be consecutive (234567, 8765) or repeating (1111,1212).

Critical Low Battery

If Confirm button flashes Red ten times when any button is pressed, then battery power is at a critically low level and motorized locking will stop working to prevent accidental lock-outs. Please change batteries immediately. When replacing batteries, remove all old batteries before inserting new batteries. Used Battery Alert: After replacing batteries, if Confirm button

flashes RED with three double beeps, then the batteries do not have a full charge and may need to be replaced sooner.

Deadbolt Tampered	Confirm button flashes RED for 15 seconds	N/A	N/A	Double beeps for 15 seconds		

Troubleshooting

The turnpiece cannot rotate or operate the lock. Remove and re-install the lock, making sure that the turnpiece is in vertical position and the latch bolt is retracted.

The lock cannot be locked or unlocked by the keypad. Make sure that the codes are valid. If needed, restore the lock's default settings.

The keypad doesn't respond when touched (no lights are visible and no beeping is heard). Make sure the cables are properly connected, and make sure the batteries are new and installed correctly. Check the cable connection and the polarity of the batteries. Also make sure the batteries are not dead.

I forgot my Master Code.

Perform a Factory Reset. Once the factory reset is completed, all User Codes will be erased and the Master Code will return to the default value of 123456. The default Master Code must then be changed before the deadbolt will function or be programmed.

I need to delete a User Code that I don't remember. Delete all User Codes. Then add all needed User Codes back into the lock. See the Programming Guide.

User Code does not unlock/lock. User Code entered is not a valid User Code. Vacation Mode is enabled. See Disable Vacation Mode in the Programming Guide.

Cannot add a new User Code.

User Codes must be 4-8 digits. User Codes must be entered within 15 seconds (while keypad is active) or the process will have to be restarted. User Codes already exist. Delete a User Code before adding a new one Second User Code entered did not match first User Code entered.

An incorrect entry was made during the programming process or no entry was detected for 15 seconds so sequence timed out.

Lock will not stay in programming mode.
